

Aerospace and Marine International Introduce Their Second Generation Fleet Manager Service For Off-shore and Trans-Ocean Marine Organizations.

Date: Feb 15, 2010

San Jose, California-

Aerospace & Marine International (AMI) introduces AURORA, their second generation fleet manager service which is specifically designed for shipping company owners, operators, charterers, and tow operators to proactively assist with the monitoring of vessel and fleet movement and performance. A powerful web-based service, AURORA helps shore-side vessel operators and shipping company managers assess risk and solve potential problems that could impact their vessel and fleet's operations.

Aerospace & Marine International has a long history of leading the marine ship routing industry in the invention, development and production of the most advanced route optimization and weather forecasting technologies. With AURORA we have now integrated weather forecasting science, daily vessel/fleet voyage performance, and the option to invite the client's client into the AURORA account. This third party vessel/voyage monitoring (fully controlled by each AMI customer) extends our client's reach to their partners and cargo clients by making available an AURORA sub-account for third party optimized schedule management. This powerful feature like all of AURORA is web-based so Aerospace & Marine's clients and their clients can access pre-selected and controlled information from any PC connected to the internet. PDA and smart phone applications are scheduled to be released soon.

Aurora takes your IT department dependence out of the picture. No longer will shipping company and off-shore operations organizations need to involve their IT to approve, load and manage locally a weather company's software on their desktops and networks. Full web-based means AURORA resides on AMI's secure servers and network with all information exchanges communicated via IP with a standard browser. Aerospace & Marine International continues to lead the industry with straightforward, beneficial, and client value driven tools and solutions.
