---

San Jose CA and Banchory UK – September 15, 2009

The AMI Green Voyage Report Service addresses two important issues currently challenging today's ocean shipping industry. The first issue is how vessel owners and operators reduce their carbon footprint in a timely fashion without expensive vessel modifications and equipment purchases. The second challenge is reducing their voyage operating cost. Regulatory and social pressures are directing every industry worldwide to bolster corporate environmental stewardship. We know these are good programs and will have positive benefits going forward, but most solutions currently available come with big price tags and drawn out implementations. These are difficult hurdles to overcome given the present state of our global economy and ocean transportation industry. Nevertheless we must move forward to mitigate and eventually solve the problems that excessive greenhouse emissions continue to propagate.

The Aerospace & Marine International (AMI) Green Voyage Report Service analyzes and records your efforts at reducing greenhouse emissions. Each customized Green Voyage Report is based on the expert Optimized Voyage Routing Services provided by AMI whereby our voyage analysis services calculate and document your vessels en-route CO<sub>2</sub>, NO<sub>x</sub>, and SO<sub>x</sub> emissions. The greenhouse emissions saving and voyage operating saving (derived from reducing bunker consumption and time en-route) are reported within our cost and emissions summary. Over time the collective Green Voyage Report Service voyage by voyage summaries will contribute positively to your fleet's emission reduction effort and your companies' bottom line.
