

## The AMI Compass

## AMI's Carbon Intensity Indicator Tool

We hope you are keeping well, and we look forward to working with you through the upcoming challenges of 2023! Decarbonization is the latest buzzword in shipping. New, stricter IMO regulations will come into effect 1st January 2023 with the goal of reducing GHG emissions and improving the Carbon Intensity Indicator (CII). Are you ready?

It has been over ten years since AMI implemented the Green Voyage Report to document emission savings for all our clients. We have now upgraded our system to include a new CII Platform in order to help your good company comply with the updated regulations ([click here if you would like to learn more](#)). The BIMCO decisions from November 2022 establish that the vessel operator in time charter is responsible for maintaining the owner's desired CII rating. The owners have the responsibility of submitting yearly reports in order to maintain or improve their current CII rating, while the charterers must collaborate to ensure the CII rating target is met. Charterers on a single time charter voyage will have to route the vessel accordingly. Please note that the CII rating is not just sea buoy to sea buoy - it includes port consumptions as well.

To assist our clients' adjustments to the changing rules, we updated our EOY reports six months ago to include the full voyage GHG calculations (see page 5 in your reports). We have upgraded all our routing clients to our newest Multi-Speed Routing service (MSR) to minimise voyage consumptions and maximise emissions savings with multiple speed options. Soon, the MSR will also include the CII rating forecast for voyages.

The MSR combines safety and the best routes by applying state-of-the-art forecast models and currents. But is that it? Not at all! Through our fleet management system, clients can log in and edit voyage information, including time and fuel costs, speeds, and consumptions to best suit their needs and achieve the desired results.

Existing active clients will benefit from minimal competitive charges for the new CII system and will receive reports which comply with the new IMO regulations.
